

GYST

Milestone 2

For the main page, the user will be able to see the list of tasks due today, and the status of each task (not started, in progress, done). When clicking on a task, it will show the task details and it will be also possible to edit the task.

There will be a page where the user can create a new task. This page includes fields for the task (description, due date, category, hours needed, status), an option for setting up a reminder, and a button for saving. After saving the task, it goes back to the main page.

There will be another two pages to show the past and the upcoming tasks (with options for week or month view). And finally, a page where the user will be able to see the percentage of tasks done per category.

The following technologies will be used for this project:

HTML, CSS, jQuery, jQueryMobile, jQuery Validation Plugin (simple client-side form validation) and AngularJS (extend HTML vocabulary to create dynamic views).
